A positive percentage figure reveals that typically or overall, female employees have lower pay than male employees. The highlighted data under the new terms, shows an indication of positive gender pay change from the old terms pay landscape.

A business which has been taking action to reduce the gender pay gap for some time produces results with noticeably low levels of gender pay inequality across all the calculations, however Totally Local Company Ltd notes there is still a pay gap remaining, and understands this is in part due to less recruitment of women locally.

Comparing the results between the quartiles indicates the distribution of full-pay relevant male and female employees across the organisation, and highlights again an improvement in trend between the gender pay gap showing that under the new terms Totally Local Company Ltd is bridging the gap in the number of gender pay data for employees sitting on higher salary bands, in addition to lesser gender pay gaps within all quartiles.

Totally Local Company Ltd only have a small proportion of women in senior posts comparative to male employees. Further, considering all 4 quartiles, our gaps may be wider due to:

- Women are more likely than men to have had breaks from work that have affected their career progression;
- We have more part-time working women, most of such roles being paid via NJC and living wage salaries.
- Due to the nature of TLCs operations and services, we predominately attract male applicants for front line roles.

Under new terms the GPG is confidently on a level setting within all four quartiles. We realise that whilst this is a great step forward positive interventions need to continue.
